

SRILAKSHMI PRIYA VUTUKURI

US Permanent Resident | Phone: 214-342-1198 | vutukuri@purdue.edu | www.linkedin.com/in/srilakshmi-priya-vutukuri

PROFILE

- Graduate student in Business Analytics & Information Management, transitioning from an engineering background, to business orientated analytical thinking with technology (Python, C/C++), and operations-focused roles.
- ISM Univ, Bangalore certified Master in Embedded Systems & IoT for 6months duration, IOT Protocols, RPI, Arduino, ARM, AtMega, Data Structures and Algorithms, Coding languages.
- Hands-on experience working with sensor data, basic predictive modeling concepts, and technical system design through academic projects.

EDUCATION

Purdue University, Daniels School of Business **West Lafayette, IN**
Master of Science in Business Analytics and Information Management **August 2027**

Vellore Institute of Technology **Vellore, Tamilnadu**
Bachelors of Electrical and Electronics Engineering **July 2025**

PROFESSIONAL EXPERIENCE

Jabil Circuit India Pvt,Ltd **Pune, India**
Intern **November 2023 - December 2023**

- Reviewed 10+ PCB (Printed Circuit Board) design, assembly, and qualification documents and evaluated 30+ FCT (Functional Circuit Test) logs to understand process accuracy and identify failure patterns.
- Exposed to lean production lines and understood concepts like, 7 deadly waste in organization and how to optimize it.
- Mitigated production line hazards and prevented potential near-misses by enforcing a 100% compliance rate with industrial safety standards and mandated PPE protocols (including aprons, safety glasses, and steel-toe boots).

ACADEMIC PROJECT

Ball Bearing Fault Detection using QSVM **December 2024**
Team Member

- Developed a Quantum Support Vector Machine(QSVM) model in Python using Google Colab to classify ball-bearing faults from processed vibration signal data.

Design of Maneuverable Robotic Arm in Pharmaceutical Industry **December 2023**
Team Member

- Published by IEEE and presented at the conference, showcasing the project's design and technical approach .
- Developed a robotic arm to improve accuracy, efficiency, and safety in pharmaceutical production.

Sludge Alert detection **October 2023**
Student

- Built a sludge-level monitoring setup using an ultrasonic sensor and Arduino UNO, providing prompt notifications through a buzzer and also processed gerber file using KiCAD.

LEADERSHIP ACTIVITIES

- Served as Finance Head for VIT Community Radio, handling administrative responsibilities, maintaining documentation
- Served as a Student Coordinator in the Press and Media Team for Gravitas 2024 (Technical Fest), organizing schedules and ensuring smooth event coverage across three days of activities
- Organised a workshop event of a club during Gravitas 2024 by planning activity flow, assigning volunteer tasks, and ensuring smooth on-ground execution
